## DETAILED ACTION

### ***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 19-25, drawn to antibodies, classified in class 530, subclass 387.1, for example.
- II. Claims 26 (in part) and 27, drawn to method of treatment comprising administering antibody, classified in class 424, subclass 130.1, for example.
- III. Claims 26 (in part) and 28-31, drawn to method of treatment comprising administering antigen, classified in class 514, subclass 2, for example.
- IV. Claims 26 (in part) and 32-35, drawn to method of treatment comprising administration of DNA, classified in class 514, subclass 44, for example.
- V. Claims 36-39, drawn to method of diagnosis comprising detection of protein-antibody binding, classified in class 435, subclass 7.1, for example.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and each of II and V are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the antibody can be used in immunopurification methods, or in situ labeling.

Art Unit: 1646

Inventions I and each of III and IV are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are not disclosed as capable of use together and have different effects. Specifically, the methods do not require the antibody.

Although there are no provisions under the section for "Relationship of Inventions" in M.P.E.P. § 806.05 for inventive groups that are directed to different methods, restriction is deemed to be proper because these methods appear to constitute patentably distinct inventions for the following reasons: Groups II-V are directed to methods that are distinct both physically and functionally, and are not required one for the other. Invention II requires administration of antibody, which is not required by any of the other groups. Invention III requires administration of antigen, which is not required by any of the other groups. Invention IV requires administration of DNA, which is not required by any of the other groups. Invention V requires detection of antibody-antigen binding, which is not required by any of the other groups. Therefore, a search and examination of all of the methods in one patent application would result in an undue burden, since the searches for the methods are not co-extensive, the classification is different, and the subject matter is divergent.

Art Unit: 1646

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, separate search requirements, and different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
